

Contents

Introduction	iv
Chapter 1	
1A Laboratory Introduction	1
1B Graphing Techniques	5
1C Percent of Mixtures	9
Chapter 2	
2 Physical States of Matter	13
Chapter 3	
3A Significant Digits in Measurement of Matter	17
3B Measurement of Matter	21
Chapter 4	
4 Mixtures of Isotopes	25
Chapter 5	
5 Periodic Trends	27
Chapter 6	
6A Bond Types	31
6B Models of Molecular Shapes	35
Chapter 7	
7 Percent Composition	39
Chapter 8	
8A Reactions, Equations, and Stoichiometry	43
8B Stoichiometric Relationships	49
Chapter 9	
9A Boyle's Law	53
9B The Ideal Gas Law	59
Chapter 10	
10A Heat of Fusion of Ice	63
10B Specific Heat of a Metal	67
Chapter 11	
11 Formulas of Hydrates	71
Chapter 12	
12 Colligative Properties	75
Chapter 13	
13A Heats of Solution and Reaction	79
13B Reaction Rates: Temperature, Surface Area, and Concentration	83
13C Teacher Demonstration: Surface Area and Reaction Rate	87
Chapter 14	
14 Le Châtelier's Principle	89
Chapter 15	
15 Acid-Base Indicators: pH of Household Items	93
Chapter 16	
16 Electrolysis of Water	99
Chapter 17	
17A Models of Organic Compounds	103
17B Soaps and Detergents	109
Chapter 18	
18 Enzymes	113
Chapter 19	
19 Mass Defect and Binding Energy	117
Appendixes	
A. Laboratory Equipment	121
B. Laboratory Techniques	125
C. Laboratory Safety and First-Aid Rules	130

CONTENTS

Introduction	vii
Chapter 1: Science, Chemistry, & You	1
1A Science and the Scientific Method	1
1B The History of Chemistry	6
1C Chemistry and You	13
Chapter 2: Matter	21
2A The Classification of Matter	21
2B Energy in Matter	29
2C The States of Matter	36
Chapter 3: Math: The Central Language of Science	43
3A The Measurement of Matter	43
3B Reporting Measurements	48
3C Organized Problem Solving	58
3D Density	60
Chapter 4: Atomic Structure	67
4A The Development of Atomic Models	67
4B The Quantum Model	80
4C Numbers of Atomic Particles	88
Chapter 5: Elements	101
5A The Periodic Table	101
5B Periodic Trends	110
5C Descriptive Chemistry	117
Chapter 6: Chemical Bonds	135
6A How and Why Atoms Bond	135
6B The Quantum Model and Bonding	148
Chapter 7: Describing Chemical Composition	163
7A Oxidation Numbers	163
7B Nomenclature	170
7C The Mole	181
Chapter 8: Describing Chemical Reactions	199
8A Writing Equations	200
8B Types of Reactions	207
8C Stoichiometry	212
Chapter 9: Gases	227
9A The Nature of Gases	227
9B Gas Laws	234
9C Gases and the Mole	242
Chapter 10: Solids & Liquids	259
10A Intermolecular Forces	259
10B Solids	262
10C Liquids	272

12B Measures of Concentration	317
12C Colligative Properties	322
12D Colloids	328
Chapter 13: Thermodynamics & Kinetics	337
13A Thermodynamics	337
13B Kinetics	351
Chapter 14: Chemical Equilibrium	365
14A Theories of Chemical Equilibrium	365
14B Applications of Equilibrium Chemistry	377
Chapter 15: Acids, Bases, & Salts	389
15A Definitions and Descriptions	389
15B Equilibria, Acids, and Bases	393
15C Neutralization	406
Chapter 16: Oxidation-Reduction	417
16A Redox Reactions	417
16B Electrochemical Reactions	431
Chapter 17: Organic Chemistry	443
17A Building an Organic Compound	443
17B Hydrocarbons	446
17C Substituted Hydrocarbons	456
17D Organic Reactions	466
Chapter 18: Biochemistry	475
18A Carbohydrates	476
18B Proteins	481
18C Lipids	484
18D Cellular Processes	487
Chapter 19: Nuclear Chemistry	501
19A Natural Radioactivity	501
19B Induced Reactions	513
Appendixes	524
Glossary	528
Index	542
Photograph Credits	550
